ICG/IOTWMS Task Team on Capacity Assessment of Tsunami Preparedness

BACKGROUND

- In the aftermath of the 2004 Indian Ocean tsunami, IOC facilitated missions to assess the state of tsunami readiness in 16 affected countries.
- The findings were published in the 2005 Assessment of Capacity Building Requirements for an Effective and Durable Tsunami Warning and Mitigation System in the Indian Ocean (IOC/INF-1219)
- These findings provided critical inputs to the design and development of the IOTWMS.

METHODOLOGY

- 12 years later, the ICG/IOTWMS at its 11 session (Putrajaya, Malaysia, 2017) decided to establish a Task Team to design and conduct an extensive online survey covering all aspects of the end-to-end tsunami warning and mitigation system.
- The online survey forms the dataset for the 2018 Status Report on Capacity Assessment of Tsunami Preparedness in the Indian Ocean.
- 20 Indian Ocean countries have provided input to the Capacity Assessment

IOC TS-143: Capacity Assessment of Tsunami Preparedness in the Indian Ocean: Status Report, 2018

Capacity Assessment of Tsunami Preparedness in the Indian Ocean

Status Report, 2018

Executive Summary

Capacity Assessment of Tsunami Preparedness in the Indian Ocean

Status Report, 2018

UNESCO

COMPARATIVE LISTS OF COUNTRIES SURVEYED IN THE 2005 AND 2018 ASSESSMENTS (by alphabetical order)

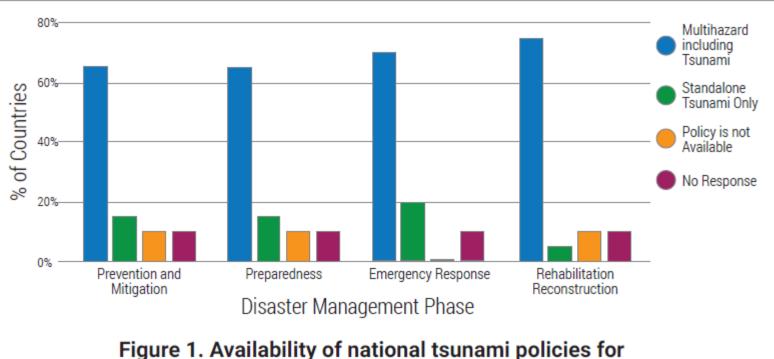

2005 Assessment of Capacity Building Requirements for an Effective and Durable Tsunami Warning and Mitigation System in the Indian Ocean (IOC/INF-1219) – Consolidated Report for Countries Affected by the 26 December 2004 Tsunami	2018 Capacity Assessment of Tsunami Preparedness in the Indian Ocean –Status Report (IOC Technical Series, 143)
	Australia
Bangladesh	Bangladesh
Comoros	Comoros
	Overseas France (Indian Ocean)
	India
Indonesia	Indonesia
	Iran (Islamic Republic of)
Kenya	Kenya
Madagascar	Madagascar
Malaysia	Malaysia
Mauritius	Mauritius
Mozambique	Mozambique
Myanmar	Myanmar
Oman	Oman
Pakistan	Pakistan
Seychelles	
	Singapore
Somalia	
	South Africa ¹⁶
Sri Lanka	Sri Lanka
Tanzania	Tanzania
Thailand	Thailand
	Timor-Leste

2018 CAPACITY ASSESSMENT REPORT

- The 2018 assessment provides a new baseline of the status of tsunami preparedness capacity in the region.
- The online survey include five sections: 1) Policies, plans and guidelines; 2) risk assessment and reduction; 3) detection, warning and dissemination; 4) public awareness, preparedness and response; 5) Recommendations to address policy gaps and support requirements
- The results indicate that there has been considerable improvement across all components of the IOTWMS since 2005
- It also identifies specific gaps and prioritises capacity development requirements at both regional and national levels
- A summary of each responding country is provided in Annex IV

National Tsunami Policies

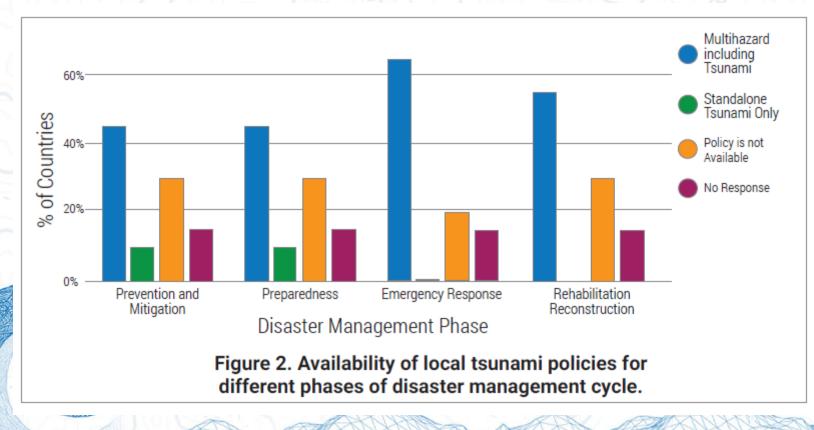

CONTRACTION OF

different phases of disaster management cycle.

Local Tsunami Policies

CONTRACTION OF THE OWNER

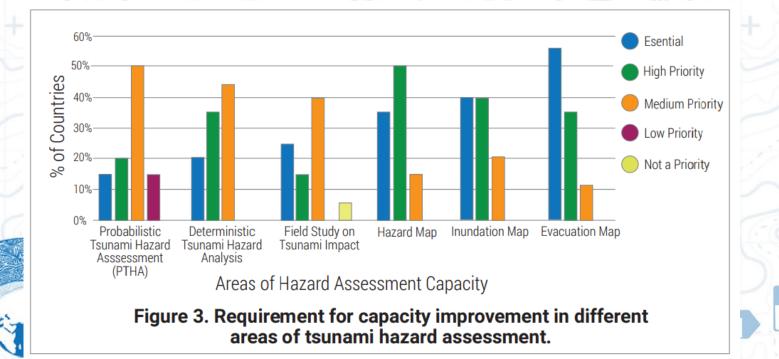

Recommendations (Policies, Plan and Guidelines)

- Provide support to increase availability of tsunami policies, plans and guidelines at the prevention and mitigation, preparedness, and recovery and reconstruction phases of disaster management
- Provide support to increase availability of tsunami policies, plans and guidelines at the local level, either as standalone or as part of a multi-hazard approach

RISK ASSESSMENT AND REDUCTION

CONTRACT OF CONTRACT

RISK ASSESSMENT AND REDUCTION

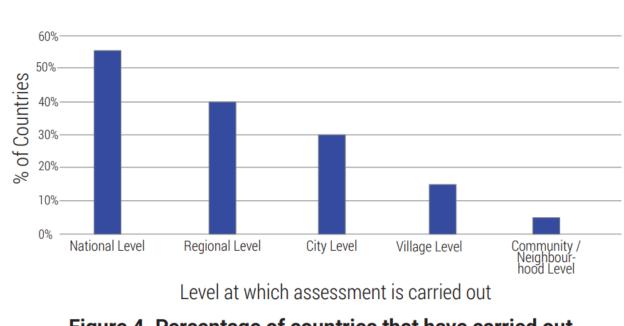

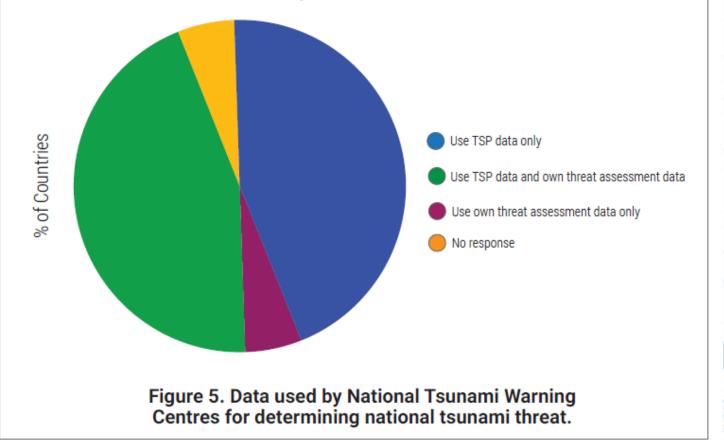

Figure 4. Percentage of countries that have carried out tsunami risk assessments at different levels.

Recommendations (Risk Assessment and Reduction)

- Increase engagement of other national, regional or international actors in the carrying out of tsunami hazard and risk assessments
- Increase the availability of publicly accessible data for tsunami hazard and risk assessments
- Increase the capacity for tsunami hazard assessment, especially in the areas of evacuation mapping, hazard mapping and inundation mapping
- Capitalise on the existing capacity in Member States for delivering training on hazard mapping and inundation mapping
- Increase the capacity for city, village and community level tsunami risk assessments
- Increase the capacity for developing products from tsunami risk assessments, such as risk maps, evacuation maps, guidelines and action plans

Detection, Warning and Dissemination

Detection, Warning and Dissemination

- All countries reported they have the capacity to assess and/or receive potential tsunami warning threat information and provide advisories or warnings to their coastal communities.
- 18 countries reported they have access to seismic network data.
- 12 countries reported having the capacity to use tsunami models using a variety of software tools.
- Countries use a wide range of media to disseminate tsunami information.
 Email is the most widely used followed by SMS and television.

Recommendations (Detection, Warning and Dissemination)

- Provide support to increase the capacity for analysing real-time seismic and sea-level data for tsunami threat
- Provide support to increase the capacity for tsunami modelling to support generation of threat forecasts
- Undertake a further study to examine whether there is a need for so many different software tools to be used to analyse data for tsunami threat or tsunami modelling
- Increase the frequency of tabletop or similar tsunami warning exercises to review and test SOPs, and reduce the potential for complacency among countries that have not experienced a recent tsunami event

AWARENESS, PREPAREDNESS & RESPONSE

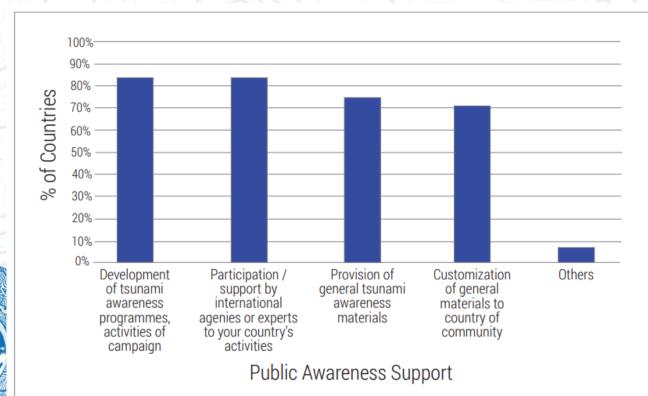

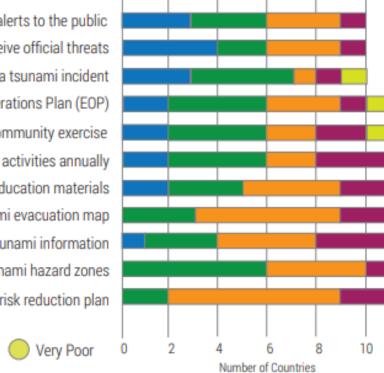

Figure 8. Support required for public awareness activities.

CONTRACTOR OF

AWARENESS, PREPAREDNESS & RESPONSE

Have redundant and reliable 24 hours warning point to issue alerts to the public Have redundant and reliable 24 hours warning point to receive official threats Commit to support the Emergency Operations Centre (EOC) during a tsunami incident Address tsunami hazards in the community's Emergency Operations Plan (EOP) Conduct an annual tsunami community exercise Hold at least three outreach or education activities annually Develop and distribute outreach and public education materials Produce easily understood tsunami evacuation map Have a public display of tsunami information Have designated and mapped tsunami hazard zones Have a community tsunami risk reduction plan

0TR Indicator

Figure 9. Status of Indian Ocean Tsunami Ready Indicators.

Recommendations (Awareness, Preparedness and Response)

- Provide support for countries to improve their SOPs at the interface between upstream and downstream, including the operation of a 24/7 emergency operation centre, receiving information from the NTWC, and response criteria and decisionmaking, as well as the associated human resources and infrastructure.
- Provide support for countries to improve their SOPs to address warning dissemination, communication with the NTWC, communication with other stakeholders, evacuation call procedures, communication with local government and media arrangements, as well as the associated human resources and infrastructure.
- Provide support for the development of community level evacuation SOPs.

- Capitalise on the willingness of countries to share their SOPs to share good practices across Member States.
- Provide training and share Member States' experience of different types of evacuation infrastructure.
- Provide support to incorporate tsunami exercises into cities, villages, communities and schools.
- Provide training and share Member States' experience of different public engagement materials.
- Develop educational materials such as teaching kits, and encourage the incorporation of tsunami awareness into the school curricula.
- Raise awareness of the Global Disaster Risk Reduction Day (13 October) and World Tsunami Awareness Day (5 November).

Thank you.
