

Co-designing ocean observing for the tropics

 CCIB - P1 floor - 133-134, Barcelona
 11 April 2024 | 13:15 - 14:45 CET

Building a **transformative** and **solutions-oriented** ocean observing system is critical to the success of the UN Ocean Decade. The design of such systems should follow the principles of **co-design**, working with **stakeholders** across the value chain and integrating their needs into the process.

This side event will focus on an **interactive** “speed-dating” session with areas around pan tropical societal user areas requiring better services. This will allow for discussions with user-area leadership on regional involvement and collaborations from across the value-chain.

FOCUS AREAS

Tropical Cyclones
Boundary Currents
Marine Heatwaves
Carbon
